Contents

No. 1. FEBRUARY 1977

GERALD EHRENSTEIN and HAROLD LECAR. Electrically gated ionic channels in lipid bilayers 1

E. A. PADLAN. Structural basis for the specificity of antibody–antigen reactions and structural mechanisms for the diversification of antigen-binding specificities 35

H. WENNERSTRÖM and G. LINDBLOM. Biological and model membranes studied by nuclear magnetic resonance of spin one half nuclei 67

News from IUPAB 97

No. 2. MAY 1977

THOMAS H. MOSS. A focus for biophysical research in energy problems 99

CARL-GÖRAN HEDEN. Enzyme engineering and the anatomy of equilibrium technology 113

NEVILLE R. KALLENBACH and HELEN M. BERMAN. RNA structure 137

News from IUPAB 237

No. 3. AUGUST 1977

GEORGE NEMETHY and HAROLD A. SCHERAGA. Protein folding 239

JOACHIM SEELIG. Deuterium magnetic resonance: theory and application to lipid membranes 353

News from IUPAB 419

No. 4. NOVEMBER 1977

ARABELLA T. MORRIS and RAYMOND DWEK. Some recent applications of the use of paramagnetic centres to probe biological systems using nuclear magnetic resonance 421

G. G. KNEALE, J. P. BALDWIN and E. M. BRADBURY. Neutron scattering studies of biological macromolecules in solution 485

ALFRED GIERER. Physical aspects of tissue evagination and biological form 529

News from IUPAB 595
